

Masstech Kumulate System Usage

(June 1, 2022)

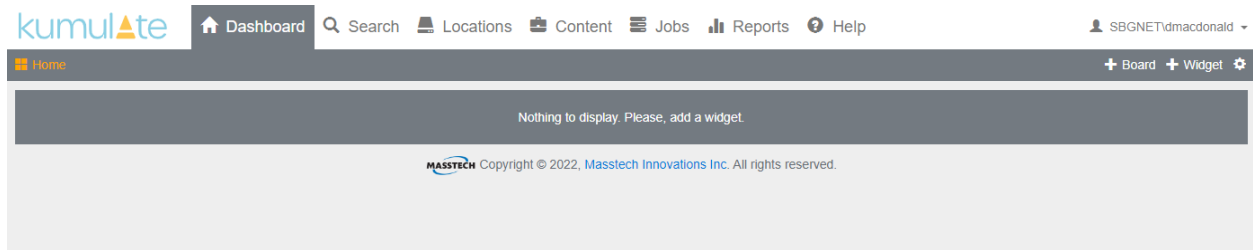

The current version of Masstech software is called “Kumulate”. Open a web browser and go to <http://katu-mtn1/>. Then click on the Windows logo shown below:

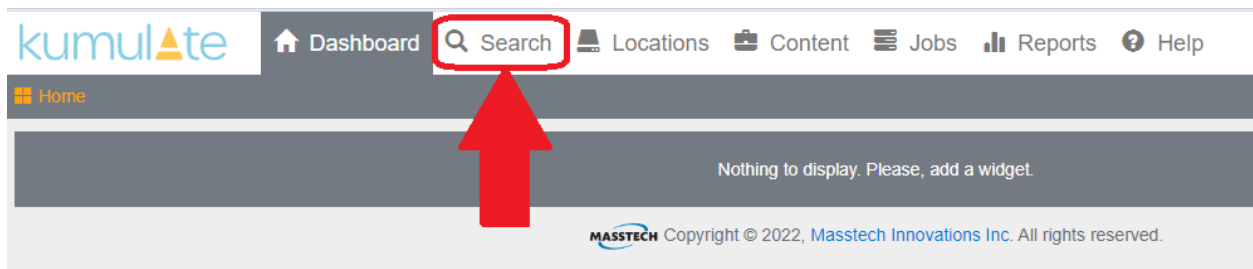

The Windows logo will turn orange and the “Username” and “Password” lines will disappear, leaving only the “Sign In” button:

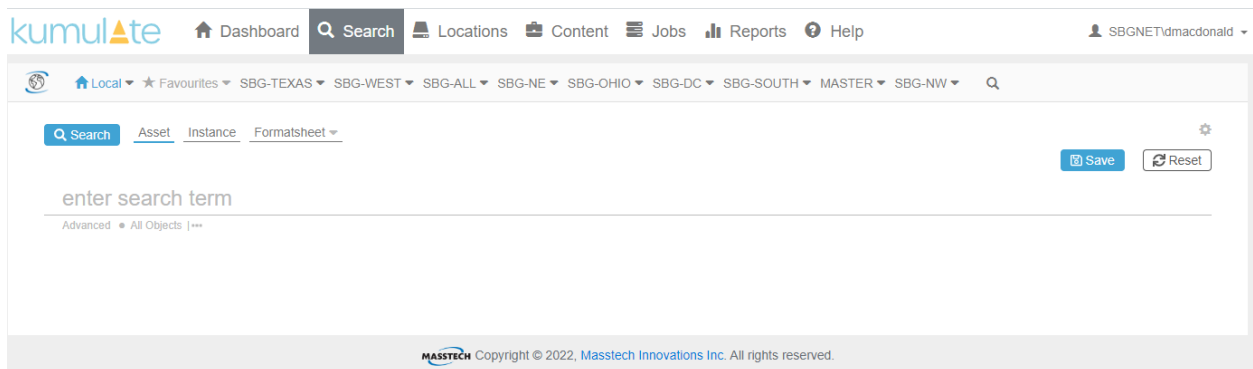

Click on the “Sign In” button. You will then go to the “Dashboard”:

To use the Search functionality, click on the “Search” tab at the top of the screen, next to the “Dashboard” tab:

This will bring you to the “Search” page, as shown below:

On the search page you now need to select the scope of your search by choosing which stations you want to search.

Note that along the top of the search box are a list of the various Sinclair regions (SBG-TEXAS, SBG-WEST, SBG-ALL, SBG-NE, SBG-OHIO, SBG-DC, SBG-SOUTH, MASTER, and SBG-NW). On the far-left side the “Local” system is represented as well. If you click on the arrow to the right of each region you will get a list of stations in that region as well:

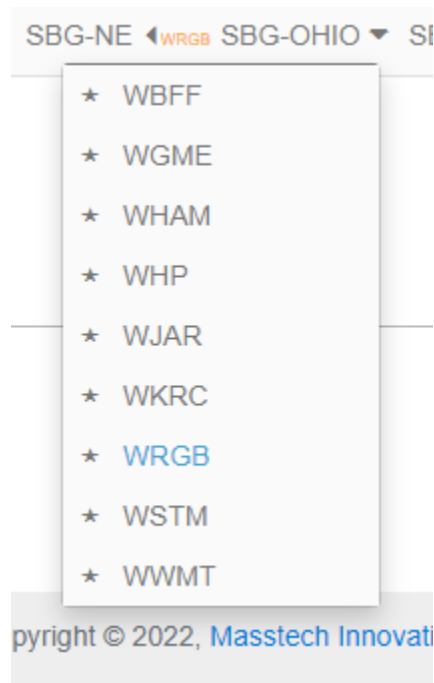

[ites](#) ▼
 [SBG-TEXAS](#) ▼
 [SBG-WEST](#) ▼
 [SBG-ALL](#) ▼
 [SBG-NE](#) ◀
 [SBG-OHIO](#) ▼
 [SBG-DC](#) ▼
 [SBG-SOUTH](#)

[stance](#)
[Formatsheet](#) ▼

erm

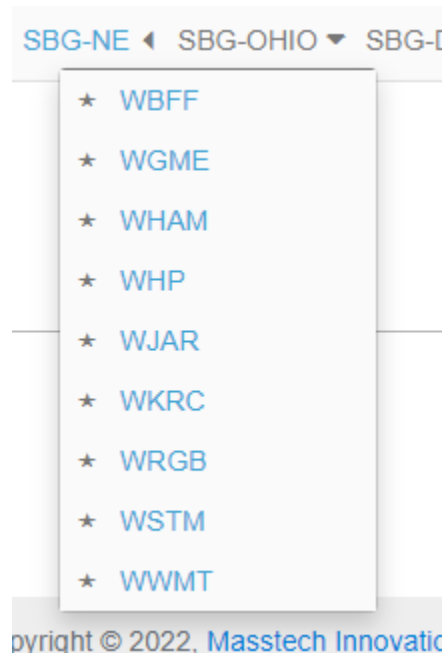

- ★ WBFF
- ★ WGME
- ★ WHAM
- ★ WHP
- ★ WJAR
- ★ WKRC
- ★ WRGB
- ★ WSTM
- ★ WWMT

To select a region or a station, simply click on it so that it changes from grey text to blue text:

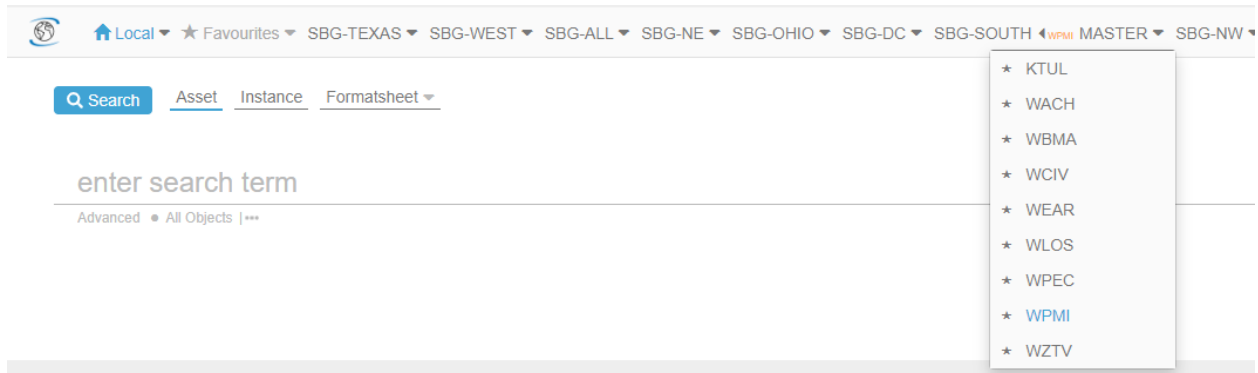

Note that at the top you can see the station's call letters listed in addition to the station letters being displayed in blue.

Alternatively, if you click on the region itself, it will turn blue, and all the stations in the category will show selected by turning blue as well:

In the following example search, we will choose to search for a story at WPMI in the SBG-SOUTH region. Note in the following picture that the “Local” system is selected, because it is showing blue text, and WPMI is selected (you can see the call letters next to the SBG-SOUTH category, and if you click on the arrow, you can see the station’s call letters are also blue):

Let’s search for “mayor controversy” by typing on the line where it says “enter search term” then clicking on “Enter”. This will get us results from our local system (e.g. “KATU”) and from WPMI:

Local Favourites SBG-TEXAS SBG-WEST SBG-ALL SBG-NE SBG-OHIO SBG-DC SBG-SOUTH WPXI MASTER SBG-NW

Once we click on the “Localize” button we can monitor the progress by clicking on the “Jobs” tab at the top of the interface:

The job can be opened by clicking on the “plus” sign to see the individual parts of the job running:

Clicking on the “plus” opens the job as shown:

There are many parts to the job, depending on where the media at the source is stored (Cloud or tape), and the number of users accessing the system. It may take several minutes for each item. For this

example, it took almost 18 minutes for the remote system at WPMI to eject the tape media and load another tape, then “locate” and copy the video:

<input type="checkbox"/> BHDN_6P P MAYOR MA...	KATU,FEDERA...
